

JOÃO RIBEIRO PINTO

biomedical engineer

name: João Tiago Ribeiro Pinto
birth: 26/01/1994
country: Portugal
email: jtrpinto@gmail.com
phone: (+351) 912 973 549
website: jtrpinto.github.io
linkedin: pt.linkedin.com/in/jtrpinto

I have recently finished my master in bioengineering, that gave me wide perspectives, knowledge and capabilities on science and technology, especially for medical applications. I am mainly fond of pattern recognition, signal and image analysis, and I love the way they open possibilities in every scientific field. Thrilled to innovate and solve challenging problems, I pursued a path towards research, working on biometrics with various traits, and also on image and signal analysis for medical diagnosis. I am looking to continue tackling current problems in new and exciting fields.

PROGRAMMING

most used:

 python	 matlab
 sql	 html
 css	 php

basic knowledge:

 C/C++	 java
 javascript	 labview

briefly explored:

 R	 C#
 .net	 jQuery
 bootstrap	 react.js
 angular.js	 sass

OTHER SKILLS

languages:

portuguese: native // english: fluent

software validation & testing //
entrepreneurship // marketing //
graphic design

EDUCATION

master in bioengineering

branch of biomedical engineering

Faculdade de Engenharia, Universidade do Porto (FEUP)

license degree in 2015 // master degree in 2017

RECENT ACTIVITY & EXPERIENCE

msc research fellow at FEUP (since 08/2017)

research on biometrics and drowsiness detection, with ECG, in automobiles.

master thesis trainee at CardioID Tech. (09/2016 - 07/2017)

research on signal processing and machine learning approaches for biometric recognition, using ECG signals acquired from drivers, on the steering wheel.

vice-chair at EMBS UP (11/2015 - 07/2017)

organisation and supervision of activities, projects, and workshops related to engineering in medicine and biology, liaison with the local IEEE student branch, and promotion of IEEE and EMBS to academic and professional communities.

student researcher at VILab (09/2015 - 04/2016)

team research on machine learning and computer vision applications (mainly on biometrics).

MAIN FIELDS OF INTEREST

computer
vision

signal
processing

machine
learning

mobile apps
& ui design

web &
databases

sensors &
electronics

MAIN PROJECTS

SPHERE challenge: multisensor activity recognition

Activity and location recognition of subjects on a house, using accelerometers, 3D video, and motion detectors. Required dealing with missing and noisy data. Ranked 63rd among 579 teams. Tools: Matlab (kNN, SVM, AdaBoost).

Urinary bladder CAD system for 3D reconstruction

Development and evaluation of an algorithm for urinary bladder segmentation in contrastless CT images of patients suffering from bladder wall tumours. Work published in an international peer-reviewed journal.

Bone texture for diagnosis of osteoporosis

Extraction of femur radiograph texture features for detection of osteoporosis. Tools: Matlab (Naïve Bayes, Parzen, kNN, SVM).

WAD: Web Aided Diagnosis

Simple image analysis and diagnosis embedded in a website to aid clinicians. Tools: PHP, HTML, CSS, SQL, JavaScript.

Personalised medicine: gene mutation classification

Recognising mutations with categorical data on thousands of genes & variations. Tools: Python - pandas, sklearn, bokeh (Random Forests, GBM, ANN, Naïve Bayes).

PUBLICATIONS

a versatile method for bladder segmentation in computed tomography two-dimensional images under adverse conditions
