About me: I hold an integrated master degree in Bioengineering - Biomedical Engineering, and I am now pursuing a Ph.D. degree in Electrical and Computers Engineering. I have studied a wide array of subjects such as sensors, electronics, signal processing, image analysis, programming, biomechanics, robotics, bionics, and entrepreneurship. Currently, as Research Assistant at the Visual Computing and Machine Learning research group of INESC TEC, I work on signal processing, computer vision, and pattern recognition for continuous biometric recognition and well-being monitoring. I am especially focused mainly on the use of ECG signals from off-the-person, unconstrained, and seamless acquisition settings. Besides pattern recognition, I am very passionate about graphic design, web development, history, geography, vexillology, heraldry, and politics.
